T 3'), on equal amounts of mRNA from 2 13.5dpc and 2 14.5dpc embryos [total RNA provided by Minoru Ko, Wayne State Univ., from 2 1; double-erranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified normalization. Library went through one round of normalization, and was constructed by Bento Soares and M.Fatima Bonaldo.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The clone sequenced to the left is CTA-271G13, 200 bp overlap; the clone sequenced to the right is AC023375. Actual start of this clone is at base position 102112 of CTA-271G13; actual end is at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This clone is from the first BAC library from Genome Systems, Inc. (http://www.genomesystems.com).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTE: This is a 'working draft' sequence. It currently consists of 37 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the dans are impresented.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Insert size: 174000; agarose-fp

This entry estimates All manual Quality le leartry le leartry le leartry le leartry le control leartry le control leartry le control leartry le leartry lea	entry has been annotated with sequence quality nates computed by the Phrap assembly program. nanually edited bases have been reduced to quality zero. Ity levels above 40 are expected to have less than for in 10,000 bp.  by base quality values are not generally visible from the mix flat falle format but are available as part	This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one with	Subclone; and the assembly was confirmed by restriction digest. Sequence Validation: This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest	ents with sequence-predicted fragments is given below. lectronically-digested sequence consists of both insert and r, in order to accurately represent the entire circular BAC. fragments below a variable cutoff (approximately 400-800 bp) of resolved in the findernrint and honce of more	e table. There are no significant remaining discrepancies en the experimental and predicted values. Uniquely ordered ents are separated by dashed lines. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                          N. per perimers AAZ36155-56 were used to amplify a cancer associated antigen gene designated KOC-1. The specification also describes a cancer associated antigen designated CT7. The CT7 polymucleotide was isolated associated antigen designated CT7. The CT7 polymucleotide was isolated from SK-MEL-37 melanoma cells. The polymucleotide has some homology with MGGE-10, limited to about 210 carboxy terminal amino acids. The amino cerminal of the protein has a repetitive pattern, with repeats rich in terminal of the protein has a repetitive pattern, with repeats rich in termine, proline, glutamine and leucine, and an almost invariable core of serine, proline, glutamine and leucine, and an almost invariable core of peptides which provoke lysis by cytolytic T cells. The polymucleotides and polypeptides can be used for treating a cancerous condition and an application with an antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony continuating factor (GM-CSF).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of
                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                            Probe #25064 used to measure gene expression in human placenta sample.

```
The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cancer; therapy; treatment; human; tumor; immunogenic; cytostatic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

comprising an immunogenic portron of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polynuclectides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting calls expressing P2 and then administered to the patient to inhibit
Isolated polypeptide comprising an immunogenic portion of a lung tumor protein is used for detecting and monitoring progression of lung cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; lung tumour; lung cancer; cytostatic; immunostimulant; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Polynucleotides encoding lung tumor polypeptides, useful for treating
lung cancer or stimulating an immune response -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Wang A, Skeiky YAW, Li SX, Kalos MD, Henderson R.

```
The present invention describes human lung tumour proteins. Human lung actions and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, tusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present
tumour proteins and polymucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polymucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polynucleotides encoding lung tumor polypeptides, useful for treating lung cancer or stimulating an immune response -
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; lung tumour; lung cancer; cytostatic; immunostimulant; vaccine;

Human lung activaties, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or estimalating an immune response. ABL48959 to ABL49300 and ABB74946 to ABLA9570 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                               The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL49559 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

   The present sequence represents a cancer associated antigen gene designated KOC-1. The specification also describes a cancer associated antigen designated CT7. The CT7 polymucleotide was isolated from antigen designated CT7. The CT7 polymucleotide was isolated from CSC SK-MEL-37 methanoma cells. The polypeptide has some homology with MAGE-10, limited to about 210 carboxy terminal amino acids. The amino terminal of the protein has a repetitive pattern, with repeats rich in serine, proline, glutamine and leucine, and an almost invariable core of the peptide given in AAVAS877. The CT7 polypeptide can be processed to peptides which provoke lysis by cytolytic T cells. The polymucleotides and polypeptides can be used for treating a cancerous condition and screening for or diagnosing cancerous conditions. The cancer associated antigens can be used as an immunogenic or vaccine composition with an adjuvant, e.g. a cytokine, a saponin, or granulocyte macrophage-colony stimulating factor (GM-CSF).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polymuclectides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T.Cells isolated from a patient are treated with P2, polynuclectides encoding P2 or antigen presenting development of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, cancer, colon, breast, ovary, oesophagus, kidney, thyroid, stomach, lung, prostate, pancreas, carcinoma, antitumour, cancerous, cytostatic, gene therapy, antineoplastic, Wilm's tumour, adenocarcinoma,
                                                                                                                                                                                                                                                                                                                                       Isolated polypeptide comprising an immunogenic portion of a lung tumor protein is used for detecting and monitoring progression of lung cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The present invention describes a method (MI) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABLG1664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used for producing a product which anti-neoplastic agent, and can be used for producing a product which is set to the anti-neoplastic agent as a neti-neoplastic agent as a structure and/or properties of the agent. MI can be used in the set to essure the cancer such as colon, breast, stomach, lung, thyroid, cancer such as colon, breast, stomach, lung, thyroid, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating ductal cancer, arcinoma, papillary carcinoma and Wilm's tumour.
Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set
                                                                                                                                                                                                                 Claim 1, SEQ ID 3742; 44pp; English.

Human lung tumour proteins and polynuclectides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynuclectides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB7500 represent sequences used in the exemplification of the present
                                                                                                   Human; lung tumour; lung cancer; cytostatic; immunostímulant; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polynucleotides encoding lung tumor polypeptides, useful for treating lung cancer or stimulating an immune response -

New promoter of the KOC gene, useful for diagnosis and treatment of cancer, for inducing cellular dedifferentiation and for identifying modulators

Claim 2; Fig 1a-b; 74pp; German.

Unit invention describes a mover now course course.

Overexpressed in cancer) promoter. The products of the invention have overexpressed in cancer) promoter. The products of the KOC protein and can be cytostatic, dermatological, vulnerary and immunostimulant activity, are cytostatic, dermatological, vulnerary and immunostimulant activity, are cytostatic, dermatological, vulnerary and the KOC protein and can be ceeded for gene therapy. The KOC promoter is also useful (1) for diagnosis of tumours that express KOC, particularly for differentiating between of tumours that express KOC, particularly for differentiating between chronic pancreatitis and pancreatic carcinoma; (ii) to detect to cells; and (iii) to evaluate treatments; (iv) to impart pluripotency to cells; and (iii) to evaluate treatments; (iv) to impart pluripotency to cells; and (iii) to evaluate treatments; (iv) to improve engraftment of expansion of hematopoietic stem cells; (vii) to improve engraftment of expansion of hematopoietic stem cells; (viii) to improve engraftment of the processes; (x) as prophylactic agents during chemotherapy/radiation the health of the promoter can also be used (i) for including for cosmetic purposes; and (xii) to immunise against malignant including for cosmetic purposes; and (xii) to immunise against malignant concluding for cosmetic purposes; and (xii) to immunise against malignant including for cosmetic purposes; and (xii) to immunise against malignant concluding the cancer (for controlling protein expression); and (iv) in gene therapy of cancer (for controlling protein expression of kot to the promoter and modulate its activity. The promoter makes possible to the promoter and modulate its activity. The promoter makes possible to the promoter and modulate its activity. The promoter makes possible to the promoter and modulate its activity. The promoter makes possible of the promoter and modulate its activity when it inflammation it its activity. The promoter in the promoter its activity of an inflammatory in the promot is not sensitive to other physiological states, e.g. inflammation, it represents a tumour marker with 100% sensitivity and specificity. This sequence represents the human KOC gene described in the disclosure of This invention describes a novel KOC (KH domain-containing protein the invention.

Patent No. 6146864

GRENEALL INFORMATION:
APPLICANT: Debbie Yaver
APPLICANT: Michael W. Berka
TITLE OF INVENTION: POLYDEPTIGES Having Choline Oxidase
TITLE OF INVENTION: POLYDEPTIGES HAVING CARRIER APPLICATION NUMBER: US/09/443,087

CURRENT FILING DATE: 1999-11-18

EARLIER FILING DATE: 1999-11-24

NUMBER OF SEQ ID NOS: 2

SOFTMARE: PASSEEQ for Windows Version 3.0

SEQ ID NO 1
                                                                                                                                                                                                                                                                                                                                                                                                                        GENERAL INFORMATION:
APPLICANT: Yaver, Debbie S.
APPLICANT: Berva, Randy M.
APPLICANT: Berva, Randy M.
APPLICANT: Berva, Midnel M.
TITLE OF INVENTION: Polypeptides Having Choline Oxidase
TITLE OF INVENTION: Activity and Nucleic Acids Encoding Same
TITLE OF INVENTION: Activity and Nucleic Acids Encoding Same
FILE REFERENCE: 5735.000-08;

GENERAL INFORMATION:
APPLICANT: Lasham, Annette
TITLE OF INVENTION: Compositions affecting programmed cell
TITLE OF INVENTION: death and their use in the modification of forestry plant develo
TITLE REFERENCE: 1022
CURRENT APPLICATION NUMBER: US/09/325,932A
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 206
SOFTWARE: FeatSEQ for Windows Version 3.0
SSEQ ID: NO 128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gape
                                                                                                                                                                                                                                                                                           GENERAL INFORMATION:
APPLICANT: Debbie Yaver

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3, Application US/09739455
Patent No. 6413756
GENERAL INFORMATION:
APPLICANT: YAN, Chunhua et al
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TILLE REFERENCE: CLO.00653
CURRENT APPLICATION NUMBER: US/09/739,455
CURRENT FILING DATE: 2000-12-19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                    Welch, Rod
NWENTION: No. 6365723el Sequences of E. coli 0157

GREERAL INFORMATION:
APPLICANT: Amaral, M. Catherine
APPLICANT: Zhang, Ming
APPLICANT: Chen, Jin-Long
TITLE OF INVENTION: Regulators of UCP3 Gene Expression
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSER: SCIENCE & TECHNOLOGY LAW GROUP
STREET: 75 DENISE DRIVE
CTTY: HILLSBOROUGH
STATE: CALIFORNIA
COUNTRY: USA
COUNTRY: USA
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
